DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-39, drawn to entry portal position tracking with synchronizing receiver, classified in class 340, subclass 545.1.
 - II. Claims 40-51, drawn to transmitting a position of an entry portal based on determined timing, classified in class 340, subclass 686.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it synchronizes the activation of the receiver with the predetermined transmit interval in order to conserve power. The subcombination has separate utility such as determining the timing of a next transmitted portal position signal based on the comparison the sensed position with the previously sensed position.
3. During a telephone conversation with Mr. Richard Vermut on July 19, 2005, a provisional election was made without traverse to prosecute the invention including claims 1-39. Affirmation of this election must be made by applicant in replying to this

Office action. Claims 40-51 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Richard Vermut on July 19, 2005.

The application has been amended as follows:

In the specification, page 1, lines 13: insert -now abandoned,- after "2001,"

In claim 14, line 3: delete [method] and insert "—system—".

In claim 16, line 1: delete [claim 13] and insert "—claim 15—".

Cancel claims 40 to 51.

Allowable Subject Matter

5. Claims 1-39 allowed.

6. The following is an examiner's statement of reasons for allowance:

No prior art teach or suggest a system, a method, a computer program product performing the method (claims 1, 14, 27) for adaptively tracking the position of an entry portal, wherein the sensed position of the entry portal position is transmitted at a predetermined transmit interval, said system comprising:

Art Unit: 2636

electronic processing means for synchronizing the activation of a receiver with said transmit interval such that the receiver receives entry portal position signals transmitted at the predetermined transmit interval; and

electronic output means for updating a receiver output indicator in accordance with the entry portal position determined by the received entry portal position signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kister (US 5689236) discloses a remote garage door position indicator.

Moss (US 6346889) discloses a security system for automatic door.

Dean (US 6166634) disclose a garage door status signaling device.
